PCL106 particle filter system active ingredient with filler

The particle filter system active ingredient is suitable for all diesel engines with a standard or retrofitted diesel particle filter (except vehicles with their own additive system). Lowers the burning temperature of the soot in the filter. This extends the regeneration intervals even in unfavorable driving conditions.

Characteristics

- ✓ Lowers the burning temperature of soot in the particle filter
- ✓ Enables the soot to burn off automatically at lower exhaust gas temperatures
 - Reason for unfavorable driving profiles
- ✓ Suitable for all diesel engines with standard or retrofitted diesel particulate filters.

field of use

- ✓ For preventive use after particle filter cleaning with MF 931
- ✓ For preventative use in vehicles with diesel engines and particle filters that are operated with unfavorable driving profiles (e.g. short journeys, stop and go)

Instructions

Add the contents of the can to the tank every third tank filling.

dosage

Initial filling level at least 10 liters.

Notice

- ✓ Do not overdose
- ✓ Not suitable for additive dosing systems
